

What is AWS Command Line Interface?

The AWS Command Line Interface (AWS CLI) is a unified tool to manage your AWS services. With just one tool to download and configure, you can control multiple AWS services from the command line and automate them through scripts.

Creating IAM users and groups

Use AWS Command Line Interface (AWS CLI) commands to create an AWS Identity and Access Management (IAM) group and a new user, then add the user to the group.

Use the **create-group** command to create the group.

```
aws iam create-group --group-name Developer
```

Use the **create-user** command to create the user.

```
aws iam create-user --user-name USER
```

Use the **add-user-to-group** command to add the user to the group.

```
aws iam add-user-to-group --user-name USER --group-name Developer
```

Use the get-group command to verify that the **Developer** group contains the **USER**.

```
aws iam get-group --group-name Developer
```
